1. We have learned that planets having good points give results for the houses concerned. But for health problems, how should this work? I suppose that planets with low points for the 1<sup>st</sup>, 6<sup>th</sup>, and 10<sup>th</sup> houses (with houses D and E) will give health problems in their period? Let's take the example of someone who has a paralyzing stroke. Is the stroke seen as an "accident" and judged by the 7<sup>th</sup> house through a strong planet, and then the paralysis that follows, through the 6<sup>th</sup> house with a planet having low points? Could you give us some clues in this field please?

Generally we consider the points as per the results indicated by the house. More points gives happiness of the house. Only the 8<sup>th</sup> house indicates death, so the planets with more points can give death. Of course the main dasha lord plays an important role also.

2. What about accidents?

Accidents, heart attacks, paralysis attacks and similar events are considered an accident, so the 7<sup>th</sup> house, along with other houses, should be considered.

Total life of a human being is considered to be 120 years. Such accidents or attacks are denoting the end of life, so at the time of the event, the 8<sup>th</sup> house significator should have more points. With our efforts, we can change the results. After bypass surgery, life achieved is a bonus life. When there is an attack, it indicates the end of life, but with the help of medical treatment, one's life is extended. This is thru our own efforts. Test tube babies, family planning operations, and similar acts, change the fate of the person.

With the help of medical aids, so many things can be changed. We can find out the defect from the chart, and can be rectified by medical science. Ayurveda or herbal treatment, study of the chart has more importance. From the chart, look for the timing when any given disease can arise, or which part of the body can be affected to find out. The general trend of the body can be studied from the chart.

Before calculating the results of any chart, and particularly the charts of old aged people (also for the current period), the birth time should be rectified. One should check when the Ascendant is on the cusp of the chart – for both signs should be checked.
